Data Source: Maine Mortality Database; Data, Research, and Vital Records Program, Maine CDC.

Suicide deaths are defined as death of a Maine resident for which the underlying cause of death is coded as U03, X60-X84 or Y87.0.

Crude rates are deaths per 100,000 population.

Age-adjusted rates are deaths per 100,000 population age-adjusted to the U.S. 2000 standard population.

95% CI: 95% confidence interval of the rate.

NApp= Not applicable.

*Rates are flagged as unreliable when the rate is calculated with a numerator of less than 20.
